

# Digital Solution Factory (DSF)

## Client Business Challenge

- Clients are looking for digital solutions contrary to software development and outsourced support.
- Clients show interest not only for pure consulting and implementation but also for software assets to push their USPs.
- Clients seek verticalized solutions while large service providers (SAP, Salesforce, Microsoft) focus on developing core platforms and partnering with industry specialists.

## BearingPoint Contribution

- DSF generates industrialized solutions, leveraging existing prefabricated components to industrialize with speed.
- DSF creates digital solutions based on recurring business needs that can be verticalized across clients and industries, putting at clients' disposal a component catalogue from where to pick & choose.

## Client Business Outcomes

- Successfully implemented reliable, agile solutions and quick adoption of digital innovation
- Measurable results with digital capabilities beyond existing functionalities of large service providers
- Ideas and concepts transformed into technical solutions quickly
- Reduced costs with bespoke development ~50%
- Integrated service-support
