

Emission Calculator

Client Business Challenge

- Carbon reporting requirements are growing, with the pressure exercised nowadays through governments, rating agencies, auditors and clients.
- In order to meet the challenge of the Green Deal, clients are forced more and more to take control of their carbon footprint from cradle to grave.
- Lack of a holistic approach and tools required to effectively drive both a carbon footprint reduction and ongoing control enabled through a monitoring system

BearingPoint Contribution

- Our asset provides process, product and corporate carbon footprint calculation in one application covering the entire life cycle of a product or a service. To assess emissions at corporate level, it calculates emissions from both business travel and commuting.
- Emissions Calculator automatically makes cradle-to-grave assessments for thousands of products and even allocates emissions down to an individual customer.

Client Business Outcomes

- Emissions Calculator is not only a reporting software – it comes with services, such as baseline calculations, supporting activities for emissions reductions and features for carbon neutral, offsetting and carbon taxes.
- Extremely powerful as it processes millions of calculations within seconds with the help of big data (SAP HANA via cloud service).
- Quickly to use due to cloud service, no IT requirement or installations needed.
- EC is a modular solution consisting of separate building blocks.
